

Dewinger

When the seed wing on pine and spruce trees are dampened it loosens from the seed and can be totally removed.

This is the process that occurs in nature after the seed has hit the ground.

This is also the principle that Nomeko's dewinger follows.

A well-performed dewinging leads to good conditions for precision sowing in nurseries.

Technical data:

The cabinet:

Dimensions: (not including the compressor)

Length: 1180 mm

Width: 825 mm

Height: 1850 mm

Rotating container:

Volume: 136 Liters

Motor effect 0,37 kW

Total Weight: approx 270 Kilos
